

Next-Generation Sequencing data analysis

Workshop for beginners!

-  22.-24. 5. 2019
-  08:30–17:00
-  Brno
Czech Republic
-  750 € without VAT
-  English
-  Seats available: 20

Join the Course

We teach, you perform basic steps of NGS data analysis including but not limited to raw data manipulations, quality control, removal of undesired sequences etc. with a goal of preparing a high-quality data set that can be used for downstream analysis.

You will get to know various NGS data formats, learn about specific problems of sequencing technologies used and how to handle them, and understand the background of individual processes in NGS data editing.

Who should attend?

This workshop is designed for biologists or beginners in bioinformatics who perform or plan to perform Next-Generation sequencing data analysis. No prior knowledge of sequence data analysis or specific programming skills are required.
